FOR IMMEDIATE RELEASE

Trillium Teamologies, Inc. Finds New Ways to Save Customers Money

Royal Oak, Michigan — June 23, 2011— Trillium Teamologies, Inc. (TTI) announced today they have completed an intensive 10-week training course on Microsoft's Windows Azure. Windows Azure is a cloud services development, hosting and management environment that allows businesses to reduce operational spending, without limiting their ability to turn out powerful applications and services. Simply put, Windows Azure is an operating system for the cloud that saves customers money.

Offered by the US Partner Readiness and Delta Force at Microsoft, Operation Azure provides an in-depth training and technical resources for Microsoft U.S. partners nationwide. The training is broken down into ten weekly course topics, each focusing on different aspects of Microsoft Windows Azure. These courses range from how to engage a customer, to managing Windows Azure solutions. For each topic, participants must view a weekly webcast presented by a Microsoft expert speaker, complete homework assignments that include hands-on labs, and work on a progressive demonstration application project.

After participants complete the required demonstration application project, it is entered into a contest, in which course participants vote for the winner. Out of over seventy contest entries, Trillium took second place for a Microsoft Silverlight gadget they created. [See the gadget](#)

"Trillium understands cloud computing delivers significant efficiencies in infrastructure costs and allows IT to be more responsive to business needs." stated Greg Stanalajczo, President and Chief Operating Officer of Trillium Teamologies. Recognizing that more organizations can benefit from the flexibility and efficiency of the Windows Azure platform, Trillium has expanded its cloud services capabilities to ensure that our customers receive the best value for their enterprise and cloud implementations."

All Microsoft partners who have completed Operation Azure possess technical skills to pass create customized cloud applications that will save their customers money and help grow their business.

"Trillium understands that more businesses are moving toward a fifth generation of computing, in which applications are no longer just confined to a PC." explains Jim Brown, Strategic Partner Account Manager for Microsoft. "By offering more cloud computing options like Windows Azure, Trillium can build customers more functional web applications, and enable them to more rapidly deploy and update services at a lower cost."

About TTI

Incorporated in 1996, Trillium Teamologies is an innovative technology and creative solutions company that provides innovative solutions, projects, services, systems and products.
